Ed discovers a probably wireless connector to the Internet, probably from the FBI SID system ^{Ed's} wireless router. It seems to be an external, slow connector, but must be fast. I deduced this based on ~~an~~ an email program taking time to say connector worked, but when I unplugged the ~~wireless~~ ^{wireless} it instantly says I can't find the Internet connection. This ~~evidence~~ ^{evidence} leads me to suspect an FBI SID wireless router, and there could be alternate logical explanations.
